Volunteer Hours Tracker: Project Brief

Oct 15, 2026 · @Dillon Workman

Overview

CASWJ needs a web app for tracking volunteer hours. It replaces the Clockify workspace and Google Sheet used today. Hours are reported as in-kind value in grant applications.

Users are volunteers across CASWJ and its eight affiliated organizations, including board and committee members.

- **Stack:** Next.js, Supabase, Vercel
- **Hosting:** inside the planned CASWJ portal, at wjarts.org/portal or portal.wjarts.org. The portal setup isn't final, so the app should work at either a path or a subdomain.

Scope

At launch

- **Accounts:** admin invites users by email, or users sign up through a basic enrollment form
- **Roles:** volunteer and admin; no approval step for entries
- **Admin settings:** add and edit organizations, task categories, and tags
- **Time entry:** live timer, start and end times, or total hours for a period
- **Entry details:** date, organization, project or event, task category, tags, notes, and who entered it
- **In-kind value:** hours × rate; default $35.47, with a professional rate for some people
- **Reports:** hours, volunteers, entries, and in-kind value by organization, category, person, and date range
- **Export:** CSV
- **History:** import 2026 hours; totals should match 14,609

Later

- Volunteer coordinator role, limited to their own organization
- Admin staff role
- Paid staff time tracking

Data

The current "2026 Volunteer Hours" Google Sheet defines most of the schema.

Table	Fields
Person	ID, first name, last name, display name, email, zip code, primary organization, active, rate type, professional rate, notes
Time entry	date, project or event, person, organization, task category, entry method, start time, end time, total hours, rate, in-kind value, tags, entered by, date entered, notes
Organization	CASWJ plus eight affiliates
Task category	CASWJ Board Hours, Committee Member Hours, Participant Hours, Volunteer Hours
Tag	Grant Related, Board Service, Event Support, Administrative, Community Outreach, and others

Problems in the current Clockify data the new app should fix:

- Monthly totals are stored as fake start and end times. Support a total-hours entry.
- Coordinators log hours for other people. Track who entered an entry separately from whose hours it is.
- Some accounts are shared by role. Use individual accounts.
- Organization and category are often missing. Make them required.
- One entry is 999 hours. Add a sensible maximum.

Use anonymized data for development. The real exports contain names and emails.

Internship work

The summer 2026 WGU/Riipen internship produced prototypes on the same stack.

Item	Notes	Link
Board Agenda Builder	Live and in daily use; the reference for look and feel	caswj-agenda-builder.vercel.app
Platform Feature Brief	The brief the interns worked from	PDF
Project code, schema.sql, Deployment Guide	Code, Supabase schema, and deployment steps	Folder

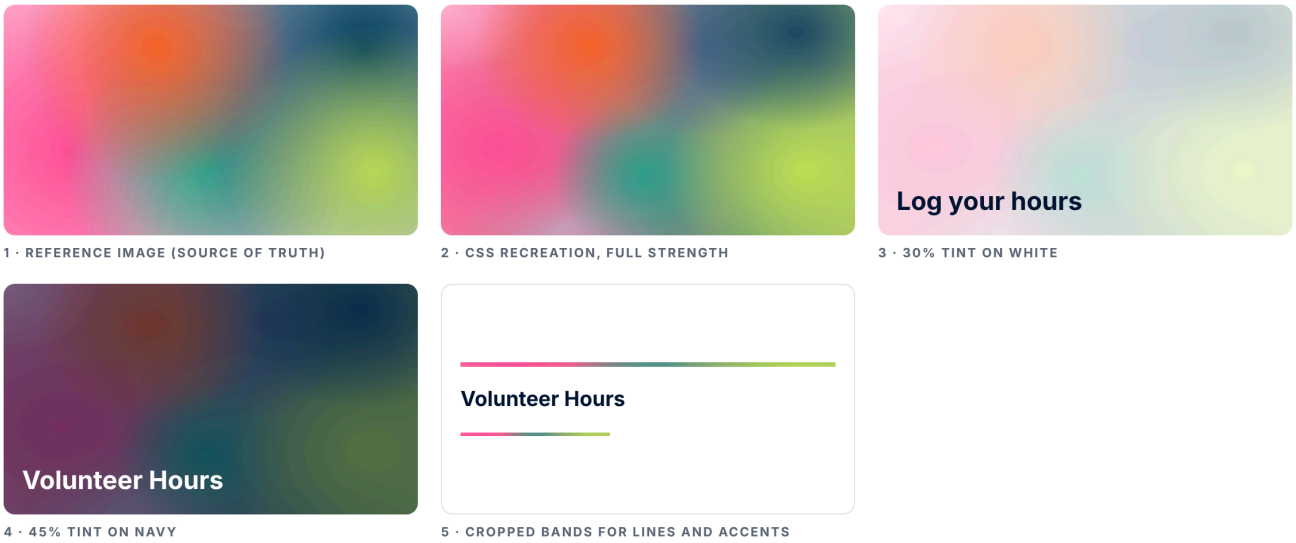

schema.sql includes person and role tables that may be reusable. Its security rules give every signed-in user full access, so this app needs per-role rules.

Design

Use the Board Agenda Builder as the reference: navy left sidebar, white canvas, Helvetica Neue, gold for emphasis. The CASWJ Brand Guidelines also apply.

Color	Hex	Use
Navy	#001836	Sidebar, headings, body text, primary buttons
Gold	#D4AC59	Highlights and active states; on navy only for text
Pink	#FF5E9F	Accents; on navy only for text
Teal	#4EBFAE	Accents and success states; on navy only for text
White	#FFFFFF	Canvas and cards

- **Type:** Helvetica Neue for headings and UI, Avenir Next for longer text. Fallbacks: Arial; Source Sans 3 or Nunito Sans.
- **Layout:** fixed navy sidebar with the white wordmark, page title and main action across the top, white cards, running totals for time.
- **Logo:** white wordmark in the sidebar, flame badge for the favicon. Use the logo files; never retype the name.
- **Gradient:** use for login, enrollment, empty states, and headers, not behind data. It can be used with transparency. For lines and accents, crop a thin band from it.

Only the treatments shown above are approved. Tokens and classes are in caswj-gradient.css.

Resources

All files are in Volunteer Hours Tracker - Developer Resources.

File	Contents
CASWJ_Brand_Guidelines_v1.1.pdf	Brand guide
caswj-gradient.css	Color tokens and gradient classes
caswj-gradient-reference.png	Gradient source image
caswj-gradient-usage.png	Approved gradient treatments
clockify-export-ANONYMIZED-sample.csv	2026 Clockify data with names, emails, and descriptions removed
CASWJ_Platform_Feature_Brief.pdf	Internship feature brief
internship-schema.sql	Internship Supabase schema
CASWJ-Deployment-Guide.docx	Internship deployment notes
code-caswj-project-master.zip	Internship project code
CASWJ logo files	Wordmark and flame badge

Data handling

- Keep real volunteer names, emails, and zip codes out of development databases and repos.
- Some volunteers may be minors. Collect only what reporting needs.
- Keep Supabase keys out of the repo, and set per-role security before real data goes in.
- The production database and Vercel project should be owned by a CASWJ account, with Jason as a collaborator.
